

BAPANAPALLI GOPI

Java Backend Software Engineer

+91 7672005018 • Hyderabad, India • bapanapalligopi7@gmail.com • LinkedIn • GitHub

PROFESSIONAL SUMMARY

Java Backend Developer with nearly 2 years of experience in designing and developing backend applications using Core Java, Spring Boot, Spring JDBC, REST APIs, MySQL, JDBC, and Git. Experienced in developing scalable microservices, optimizing database queries, implementing secure REST APIs, and collaborating in Agile teams. Strong understanding of object-oriented programming, collections, multithreading, SQL, and software development best practices.

WORK EXPERIENCE

Software Engineer, Java Backend Developer — Payswiff Technologies

Hyderabad, India | Jun 2024 – May 2026

Project: QR on POS — Batch Payment Processing

- Built a QR batch-processing service handling **50,000+ transactions/day**.
- Designed REST API suite for batch job orchestration (schedule, execute, monitor, control); built automated reconciliation engine generating XLS/XLSX/CSV/TXT reports with AWS S3 upload.
- Optimized backend and database operations, added authentication, authorization, and audit logging for compliant transaction handling.

Project: Refund Automation Platform

- Designed an end-to-end refund platform covering request processing, tracking, reconciliation, and auditing — replacing a fully manual workflow.
- Implemented Spring Batch jobs with retry logic and error-recovery workflows, improving data consistency and fault tolerance across the refund lifecycle.

Project: POS Security & Merchant Feedback System

- Implemented DUKPT encryption and RSA-based secure communication for POS key management, maintaining zero security incidents across tenure.
- Built a full-stack Merchant Feedback Management System (Spring Boot, ReactJS, MySQL, AWS) with RBAC, feedback collection, and real-time analytics; applied OWASP/CWE standards with SonarQube SAST scanning.

CORE RESPONSIBILITIES

- Backend & Database:** Designed and maintained Java/Spring Boot microservices with Kafka-based event-driven processing; implemented Spring Security/JWT auth and optimized MySQL schemas, queries.
- API & Quality:** Built, tested, and documented REST APIs using Swagger and Postman; wrote JUnit/Mockito unit tests and drove code reviews, defect analysis, and root-cause investigation to maintain production stability.
- Architecture & Agile Delivery:** Participated in architecture and performance-tuning discussions; collaborated with Product, QA, UI/UX, and DevOps across sprint planning, stand-ups, and retrospectives.
- DevOps & Documentation:** Managed Git branching workflows and Maven builds, supported CI/CD pipelines, and authored technical documentation, API specs, and deployment/troubleshooting guides.

SKILLS

Languages: Java, SQL, Core Java,

Backend & Frameworks: Spring Boot, Spring Security, Spring Data JPA, Spring Batch, Spring Cloud Config, Spring JDBC, REST APIs, Microservices, Spring Redis, Spring Mail.

Database: MySQL, JDBC, JPA/Hibernate, Stored Procedures, Query Optimization.

Messaging & Frontend: Apache Kafka, Event-Driven Architecture, Asynchronous Processing, HTTP Webhooks and API Integration

DevOps & Version Control: Docker, Git, GitHub, Bitbucket, Maven, CI/CD Pipelines, Jira

Testing, Security & Monitoring: Postman, SonarQube, SAST Scanning, Trivy, API Testing, Debugging, Secure Coding Practices, JMeter, Hyperdx, Application Logging.

EDUCATION

B.Tech in Information Technology — KKR & KSR Institute of Technology and Sciences (JNTU Kakinada), CGPA: 7.91

KEY ACHIEVEMENTS

- Delivered backend services across **three production platforms** — batch payments, refund automation, and merchant feedback — spanning event-driven, full-stack, and security-critical systems.
- Entrusted with **security-critical POS key management and encryption work** early in tenure, reflecting confidence in code quality and secure-coding discipline.
- Led a 4-month project as team lead through to on-time delivery, coordinating cross-functional collaboration across Product, QA, and DevOps under Agile/Scrum.
- Adopted **AI-assisted development workflows** (GitHub Copilot, Claude Code, Cursor) to speed up coding, debugging, and documentation.
